OPERATIONS ANALYST

Data-focused analyst proficient in SQL, Power BI, and Python, with Google Data Analytics and DP-900 certifications. Skilled at building clear dashboards and QlikView dashboards, designing ETL processes using a systematic approach and established methodology, and delivering operational insights that support Operations teams across Production, Maintenance, EHS, Procurement, Supply Chain, and Finance in meeting objectives. Strong foundation in data collection, data reporting, and visualization with KPI benchmarking, pivot tables, and process improvement (Lean/Six Sigma and CI) to turn raw data into actionable recommendations with clarity and performance reporting that facilitates smooth flow across Site Operations and IT.

CORE COMPETENCIES

Relevant Skills Supply Chain, Pivot Tables, QlikView, EHS, Manufacturing

Top Priority Skills SQL, Power BI, Python, ETL, Data Cleaning, DAX, Power Query

Programming & Query Languages SQL, Python, DAX

Data Visualization Power BI, Tableau, KPI Dashboards, Interactive Reporting, Data Storytelling

Data Engineering ETL, Power Query, ETL Pipelines, Data Transformation, Data Cleaning, Data Modeling, Excel (Advanced)

Python Libraries Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Cloud Technologies Azure, Azure SQL, Azure Blob Storage

Languages English

EXPERIENCE

DAKSHIN HOME FASHIONS, India

Mar 2021 - Present

Data Analyst - Operations & Business Intelligence, Karur

- Designed interactive Power BI and Excel dashboards to track operational Key Performance Indicators (KPIs) such as defect rate, yield, downtime, rework, and OEE, leveraging pivot tables to give plant leaders real-time visibility and benchmarking insights to make data-driven staffing and production decisions.
- Automated recurring reports in Excel and Power BI to streamline workflows, reducing manual reporting effort and accelerating operational decision-making.
- Tuned SQL queries and simplified data transformations to improve dashboard responsiveness and increase analyst productivity across reporting tools, coordinating with IT to enhance access controls and ensure smooth data flow into BI dashboards and standardized documentation.
- Partnered with production, maintenance, and quality teams to implement Key Performance Indicator validation and data checks, coordinating with KPI data controllers to ensure completeness, correctness, consistency, and clarity for accurate, actionable reporting and reduced discrepancies.
- Analyzed manufacturing data to identify operational bottlenecks and process inefficiencies, applying problem analysis and sound judgment to recommend process improvement options that met objectives and communicated insights through dashboards and executive reports.
- Built structured datasets and standardized inputs to support cross-department analytics and repeatable ETL processes, improving consistency of downstream analyses.

Lakshmi life Sciences Ltd, India

Feb 2019 - Jan 2020

MIS & Quality Analyst, Coimbatore

- Maintained Excel-based MIS to track production metrics, defect rates, and compliance indicators, using pivot tables and standardized documentation to improve daily operations visibility and strengthen performance reporting for stakeholders.
- Examined quality data to detect defect patterns and operational inefficiencies, using analytical skills and creative thinking to facilitate corrective actions and influence cross-functional teams to reduce repeat defects.
- Prepared daily, weekly, and monthly performance reports to monitor trends and support resource planning, coordinating timely closing cycles and ensuring clarity in data reporting for consistent decision-making.
- Implemented structured data validation processes across operational datasets to improve reporting accuracy, applying Lean/Six Sigma-aligned checks and a systematic approach to strengthen data collection and control.

- Supported root cause analysis by analyzing quality and process data, demonstrating resilience and motivation while working through ambiguity to document improvements and build lasting relationships with stakeholders.

Sundram Fasteners Limited, India**May 2016 - Oct 2017****Process & Reporting Analyst, Chennai**

- Analyzed production data using standardized reports and dashboards to surface trends and issues, leveraging Excel pivot tables and QlikView where applicable to inform corrective actions and operational improvements across site operations.
- Collaborated with engineering and quality teams to identify defect root causes and recommend corrective actions based on data analysis, working in tandem with operations to meet objectives and support continuous improvement (CI).
- Delivered data-driven insights and reports to operations stakeholders to support continuous improvement initiatives and daily decision-making, emphasizing procurement and supply chain impacts and fostering inclusive communication and strong interpersonal skills to build empathy and trust.

DATA ANALYTICS PROJECTS

Sales Operations Dashboard - Power BI

- Context: Interactive dashboard to monitor sales order fulfillment and dispatch performance for operations teams, using a systematic approach to data collection and performance reporting for Operational Key Performance Indicators (KPIs) and benchmarking across sites.
- Action (tools): Consolidated sales and inventory sources and built end-to-end Power BI reports using Power Query and DAX to facilitate smooth data flow, improve data reporting clarity, and generate QlikView-ready datasets for KPI benchmarking and league-table style comparisons.
- Result/benefit: Enabled operations to identify fulfillment gaps and prioritize actions to reduce bottlenecks and improve on-time dispatch.

IBM HR Attrition Analysis - Python

- Context: Investigated employee attrition to surface factors driving turnover and inform HR retention strategy, applying analytical skills and problem analysis with a clear methodology to support decision-making and options evaluation.
- Action (tools): Performed exploratory data analysis and visualizations using Python (Pandas, Seaborn, Matplotlib) to uncover patterns.
- Result/benefit: Presented clear insights that helped HR prioritize interventions around job satisfaction and work-life balance, using performance reporting with pivot tables and documentation to improve clarity and influence stakeholders.

Azure Data Analytics Pipeline

- Context: Built a cloud analytics environment to centralize data storage and support scalable BI and modeling workflows.
- Action (tools): Implemented ingestion and storage using Azure SQL Database, Azure Blob Storage, and Python ETL scripts.
- Result/benefit: Delivered a dependable cloud data foundation that streamlined data preparation for dashboards and modeling.

CERTIFICATIONS

Google Data Analytics Professional Certificate — Coursera**Business Analyst Master Certification — Edureka****Microsoft Azure Data Fundamentals (DP-900)****Mar 2024**

EDUCATION

Pavai College of Technology, Namakkal, India, Bachelor of Engineering in Mechanical Engineering, (GPA: 68)

- Bachelor of Engineering in Mechanical Engineering, graduated 2016
